

# Suplefeed

ANIMAL *Bio* NUTRITION

# BIOSAL

New bionutritional premix composed of macro and micro minerals, essential nutrients required by rumen microorganisms, with the addition of probiotics and prebiotics (enzyme complexes, yeasts, vitamins and lyophilized microorganisms).

These components provide the ruminal biota with everything necessary to achieve its maximum expression and make **the most efficient digestibility of all the food ingested by the animal.**

- Indicated for general **maintenance of rodeo body condition.**
- **Same results** as traditional supplementation, but at a much **lower cost.**
- Perfect for **breeding cows with calves at foot and/or pregnant**, to maintain their condition.

## ✓ **Species and category:**

Cattle (all categories)

## ✓ **How to use:**

The product is for self-feed and can be mixed with food according to age and productive aptitude.

# Biosal MIX

**Reduce the cost of your feeding and improve your profitability over 15% by producing at the same rate.**

This premix was designed for very fibrous diets, either feedlot or rearing, with 50% or more fiber inclusion, with the objective of lowering production costs by 15% or more.

- Hyper-fibrous diets are proposed for feedlot with up to 60% fiber per Tn in the mixer.

- The cost to produce 1 kg of meat is 20% to 30% LOWER than conventional nutrition.

✔ **Species and category:**

Cattle (all categories)

✔ **How to use:**

The product must be mixed with food according to age and productive ability.

# RBR Ruminal Biological Regulator

We ensure very **high digestibility** for diets very high on corn, avoiding acidosis and producing at the **lowest cost in the market.**

This is a biotechnological product composed of lyophilized bacteria and live yeasts, capable of consuming lactic acids, taking advantage of starch and stabilizing the rumen to increase meat and milk production.

- Eliminates the probability of acidosis due to the consumption of lactic acid.
- **Improves production levels.**
- Ideal for diets with high corn content.
- **Increases the total digestibility of the feeding.**
- Does not contain monensin

✓ **Species and category:**  
Cattle with more than 150 kg.

✓ **How to use:**  
It is applied mixed with complete foods and/or mineral premix.  
**Dosage:** 10 grs / animal / day

# AFI Intestinal Flora Activator

Based on probiotics that improve **the intestinal health of calves** in their first days of life.

- Prevents neonatal diarrhea.
- Antidiarrheal astringent.
- Toxins sequestrant.

## ✓ How to use:

Daily dose - preventive: 40 gr

Therapeutic dose: 80 gr

# Biosal Small Ruminants

The formulation of this supplement is aimed at goat, sheep and camelid species. With bio-ingredients that enhance the digestibility of cellulose and hemicellulose contained in low quality or deferred pastures.

- **Self-consumption** or in portions.
- **Greater digestibility** of any fiber available.
- **Increased milk production** for goats and sheep, **with the same usual feeding.**
- **They eat grasses that they did not eat before.**
- **Lower feed cost and higher production.**

## ✓ Species and category:

Sheep, goats, camelids.

## ✓ How to use:

The product is self-feed and can be mixed with food.
